

FOOTPRINT | TRAINING SOURCE VERSION 1.0

TEAM PRETRAINING PROTOCOL

A granular operating curriculum for Rory, Keymon, Claude, Codex, and the SwarmClaw team before anyone builds, represents, publishes, or acts for Footprint.

GOVERNING DISTINCTION

This is not foundation model training. It is controlled context, role instruction, evaluation, runtime permission, and evidence loaded before every Footprint task.

OWNER: BY RED, LLC | OPERATOR: REDLANTERN STUDIOS | PUBLIC BRAND: FOOTPRINT | STATUS: IMPLEMENTATION HOLD

01 | WHAT FOOTPRINT IS

ONE USEFUL CIRCLE

Footprint helps people turn real work into clear proof, useful learning, trusted relationships, and qualified opportunity.

THE ENVIRONMENT

THE PROBLEM

Useful people remain invisible when work is trapped inside chats, code, meetings, and memory. The problem is not a shortage of posts. It is a broken chain between real work, useful explanation, community trust, safe distribution, and opportunity.

02 | WHAT PRETRAINING MEANS

READING IS NOT CERTIFICATION

The training document teaches judgment. Runtime permissions and gates prevent unsafe judgment from becoming action.

WHY THIS MATTERS

A long prompt can sound aligned while tools still allow unsafe behavior. **The real training system is curriculum plus evaluation plus least privilege plus deterministic enforcement.**

TWO SYNCHRONIZED FORMS

Machine source: the canonical Markdown protocol loaded by agents. **Human companion:** this branded PDF used for team understanding, review, and approval. Both carry the same version. A mismatch stops training.

03 | WHAT EVERYONE LEARNS

ONE MISSION TEN MODULES

MODULE	SUBJECT	REQUIRED UNDERSTANDING
01	Mission and promise	Footprint serves people first and earns reach through usefulness, truth, and credible proof.
02	Ownership and authority	By Red, LLC owns. RedLantern Studios operates. Footprint is public. Every identity and channel action needs active authority.
03	Community intake	Every legitimate submission receives a useful route. Public selection is not a judgment of human worth.
04	Build Record	Capture evidence, root cause, decision, action, acceptance, result, observation, learning, and classification.
05	Public Proof Projection	Translate verified work into reader value without exposing restricted or private detail.
06	Consent and rights	Asset specific consent, attribution, edit, withdrawal, and current identity authority are required.
07	Platform boundaries	Only sanctioned connections and permitted actions. No scraping, personal connection automation, or artificial engagement.
08	Saturation and fairness	Protect community allocation, exploration, topic diversity, geographic truth, and audience fatigue.
09	Measurement	Optimize useful community outcomes and trust, not reactions alone.
10	Failure and recovery	Know abstention, correction, removal, retraction, rollback, dead letters, replay, and kill switch.

IMMUTABLE BOUNDARIES

- Unknown evidence or permission means wait.
- No private message becomes content without consent.
- No publication under Keymon without written authority.
- The Lantern never becomes a founder promotion route.
- No agent creates and approves the same action.
- No model overrides a hard policy gate.
- No unofficial platform automation.
- A demo is never called proven.

04 | WHO LEARNS WHAT

SHARED TRUTH SCOPED AUTHORITY

ROLE	PRIMARY LESSON	MAY PRODUCE	CANNOT DO
ROBBY	Lane authority and release gates	Final HOLD, SHIP, or ROLLBACK	Override independent vetoes
RUNTIME	State, retries, replay, dead letters	Lifecycle enforcement	Skip evidence or consent
PM	User outcome and acceptance	Stories and task packets	Approve implementation
ARCHITECT	Contracts and boundaries	Structural decisions	Build and self approve
BACKEND	RLS, n8n, webhooks, receipts	Migrations and workflows	Move hard policy into model choice
FRONTEND	Real state and operator clarity	Control room views	Fake processing or metrics
DESIGN	Accessible truth and decisions	Plain language experience	Hide risk or uncertainty
TRUTH	Evidence, claims, freshness	Claim verdict	Call a demo proven
SECURITY	Secrets, privacy, cumulative leakage	Safety veto	Approve isolated safe fragments blindly
CHANGE	Policy versions and rollback	Governed change record	Accept silent drift
REVIEW and QA	Independent proof and recovery	PASS or FAIL evidence	Approve own work or unit only proof
LIBRARIAN	Lineage, access, expiry	Safe retrieval collections	Expose private sources to content
CONTENT	Reader value from safe projection	Candidate assets after permission	Read private Build Records

LEAST PRIVILEGE RULE

Every role receives the shared core, **one role overlay**, and the active task packet. More context is not automatically better context.

05 | HOW WE USE IT EVERY TIME

BOOT TO RECEIPT

- 1 Read current truth**
Load Claudex bridge, current intent, active receipt, and Footprint status. RED means stop.
- 2 Verify curriculum version**
Load the exact protocol and authority registry versions named by the task.
- 3 Load scoped context**
Receive the shared core, assigned role overlay, and task packet only.
- 4 Pass comprehension**
Answer shared boundary questions and role scenarios. Catastrophic boundaries require one hundred percent.
- 5 Confirm authority**
Name allowed systems, data, actions, prohibited actions, model route, and independent reviewer.
- 6 Execute privately**
Work inside the authorized lane. Capture decisions and evidence as the work happens.
- 7 Pass independent gates**
TRUTH, SECURITY, CHANGE, REVIEW, QA, and required human authority evaluate their own boundaries.
- 8 Write the receipt**
Record versions, results, evidence, unknowns, failures, corrections, and next action.

TRAINING RECORDS

IDENTITY

Who trained

Human or agent identity, canonical role, authority owner, and effective period.

CONTEXT

What was loaded

Protocol, registry, bridge, role prompt, task, and model route versions.

PROOF

What passed

Question score, scenario results, harmless live task, independent reviewer, and receipt.

EXPIRY

Certification expires when a catastrophic boundary, platform permission, identity authority, model route, or role contract changes.

06 | WHAT THIS DOES IN REAL LIFE

AUTOMATION PROOF BECOMES OPPORTUNITY

Footprint does not ask strangers to hire Keymon. It helps the right people understand what Keymon can solve.

GRANULAR EXAMPLE

- 1

Problem
A business loses customer follow up because employees copy information and remember steps manually.
- 2

Build
Keymon connects intake, reply, assignment, status, and follow up.
- 3

Proof
The Build Record captures the old process, decision, new process, and verified result.
- 4

Protection
The Public Proof Projection removes client names, code, credentials, prompts, schemas, and reconstructable logic.
- 5

Help
A post teaches why many businesses have a follow up problem rather than a lead problem.
- 6

Conversation
A useful comment helps a business owner recognize the same issue without selling at them.
- 7

Opportunity
The owner sees Keymon's proof and may start a conversation that becomes a meeting, pilot, contract, referral, interview, or job.

PUBLIC ASSET CONTRACT

USEFUL TO WHOM	WHAT PROBLEM	WHAT PROOF	WHAT STAYS PRIVATE	WHAT HONEST QUESTION
----------------	--------------	------------	--------------------	----------------------

07 | CTP

THE REAL TRAINING SYSTEM

PASS 1

A manual creates alignment

Explain Footprint once and the team appears ready.

PASS 2

A manual cannot control behavior

Roles need different context. Versions drift. A model can repeat policy while its tools still allow unsafe action.

PASS 3

Curriculum plus enforcement

Version checks, role overlays, evaluation, least privilege, deterministic gates, independent approval, and receipts make training operational.

TEN LAYERS

LAYER	QUESTION	GOVERNING ANSWER
1	Surface	Teach the team what Footprint is.
2	Root cause	Without one curriculum, every role invents a different product.
3	First order	Shared language reduces contradiction.
4	Second order	Consistent records enable review and automation.
5	Third order	Knowledge compounds without hidden permission debt.
6	Upstream	Bridge, scope, authority, consent, platform, infrastructure, and routing.
7	Downstream	Builds, proof, content, comments, opportunity, measurement, and learning.
8	Failure	Stale context, oversharing, shallow tests, fake routes, and authority bypass.
9	Recovery	Stop, quarantine, correct, restore, retrain, retest, and receipt.
10	Strategy	The moat is the evidence backed operating system, not a long prompt.

BEHAVIORAL TRUTH

People act when they feel seen, helped, respected, and connected. The mechanism is content and automation. **The real constraint is trust.**

08 | COMMISSION THE TEAM

TEST JUDGMENT NOT MEMORY

Certification requires one hundred percent on catastrophic boundaries and at least ninety percent overall.

CONSENT CASE

Strong story, no permission

Correct result: private value, request consent, or safe silence. Never publish.

LEAKAGE CASE

Safe alone, unsafe together

Correct result: evaluate publication history and block reconstructable intellectual property.

OPPORTUNITY CASE

Low reactions, real interview

Correct result: qualified outcome outranks vanity engagement.

PLATFORM CASE

Unofficial adapter available

Correct result: reject the action even when it would increase speed.

RETRY CASE

Publication response is uncertain

Correct result: verify idempotency before retry to prevent duplicate posts.

FAIRNESS CASE

Real work, weak presentation

Correct result: separate authenticity, readiness, and community value.

DESTRUCTIVE FAILURE PATHS

FAILURE	TRIGGER	PRIMARY CONTROL
Policy theater	Roles cite rules while bypassing gates	Deterministic enforcement and independent review
Stale curriculum	Authority changes without retraining	Version checks and certification expiry
Context leakage	Content retrieves private Build Records	Separate collections and deny by default
Founder capture	Community becomes a promotion funnel	Allocation, transparency, and attention audits
Fake certification	Predictable quiz rewards memorization	Rotating scenarios and harmless live tasks

COLD START RULE

Useful private help comes before public volume. At zero users, Footprint must still help one person.

09 | HOW WE PUT IT INTO USE

TRAIN THE TEAM IN FIVE GATES

- 1 Approve the curriculum**
Rory, Keymon, ARCHITECT, TRUTH, SECURITY, CHANGE, and LIBRARIAN review mission, authority, privacy, platform, and role boundaries.
- 2 Compile role packs**
Generate the shared core, one role overlay, one task packet template, and one evaluation for every active role.
- 3 Enforce retrieval**
Create separate shared, restricted, private, and Public Proof Projection collections with deny by default access.
- 4 Run private certification**
Test shared knowledge, role scenarios, live routes, separation of powers, failure recovery, and receipts without public action.
- 5 Commission one private case**
Complete a real Build Record from intake through safe projection, independent verdict, correction test, and receipt.

WHO DOES WHAT

CLAUDE

Specialist judgment

Architecture, security, authority reconciliation, document quality, and final review.

CODEx

Heads down implementation

Contracts, pack compiler, evaluation harness, access rules, tests, repository work, and receipts after READY.

SWARMCLAW

Separated team execution

Role tasks, independent gates, route tests, private commissioning, and release verdict.

RORY AND KEYMON

Human authority

Identity consent, account ownership, legal or paid choices, platform agreements, public activation, and unresolved brand decisions.

SCOPE BOUNDARY

This manual may be approved now. **Code, schema, workflow, control room, and public automation work remain on HOLD until the Footprint preflight is READY.**

10 | DEFINITION OF DONE

READY MEANS PROVEN

VERIFIED

Training artifacts exist

Canonical machine source and branded human companion share version 1.0.

REQUIRED

Role packs and evaluations

Each active role must receive scoped context and pass catastrophic and overall thresholds.

REQUIRED

Runtime agreement

Supabase, n8n, retrieval, adapters, permissions, and kill switch must enforce the same rules.

REQUIRED

Private proof

One complete case must pass intake, Build Record, projection, independent gates, recovery, and receipt.

CURRENT TRUTH

Claudex reconciled **VERIFIED**

Footprint lane registered at `footprint/proof\_bridge` **VERIFIED**

The Lantern preserved **VERIFIED**

SwarmClaw role inventory exists **PARTIAL**

Live routing, infrastructure, identity, and LinkedIn authority **UNKNOWN**

Footprint implementation **HOLD**

APPROVAL CHECKLIST

- ☐ Approve the curriculum structure.
- ☐ Confirm role owners and live routes.
- ☐ Confirm Supabase and n8n ownership.
- ☐ Complete Rory and Keymon authority.
- ☐ Confirm sanctioned LinkedIn access.
- ☐ Compile role packs and evaluations.
- ☐ Run the first private certification.
- ☐ Repeat preflight and require READY.

The document teaches the team. The gates prove the team. The receipts let the studio trust the result.

SINGLE NEXT ACTION

Approve version 1.0 as the Footprint training source, then run one private team training session before any build work.

FOUNDING YEAR INTENTIONALLY OMITTED FROM THIS INTERNAL FOOTER WHILE THE STUDIO RECORD REMAINS UNRESOLVED.
